INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.	PCT/EP2004/013784
-------------------------------	-------------------

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
-----------	--

1. Statement

Novelty (N)	Claims <u>1 5</u>	YES
	Claims <u>1-14, 16</u>	NO
Inventive step (IS)	Claims _____	YES
	Claims <u>15</u>	NO
Industrial applicability (IA)	Claims <u>1-16</u>	YES
	Claims _____	NO

2. Citations and explanations (Rule 70.7)

This report makes reference to the following documents:

D1: WO-A-99/55533

D2: EP-A-0738591

D3: EP-A-0 644 048

The application fails to meet the PCT requirements for the following reasons:

Document D1 (figure 4 and page 5, paragraph 2) describes the cylinder of a printing machine having an integrated electromotor consisting of a fixed stator (39) and a rotary rotor (37). The stator (37) has multiple electromagnets arranged in the axial direction, with corresponding windings, and multiple permanent magnets arranged on the inside of the rotor, so that a corresponding torque is applied to the rotor by the current flowing through the stator winding.

Consequently, the subject matter of claim 1 is not novel (PCT Article 33(2)).

D1 further discloses the subject matter of claims 2-5

PCT/EP2004/013784**Box No. V Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

(figure 4 in connection with page 5, paragraph 2, the last two sentences), the subject matter of claim 6 (the axis has the form of a cylinder shell), claim 8 (bearing (42) and page 6, penultimate paragraph), claim 9 (page 5, last paragraph), claim 10 (page 7, paragraph 4), claim 11 (figure 4), claim 12 (page 5, lines 8-10), claim 13 (page 1, paragraph 1), claim 14 (page 6, last paragraph - page 7, paragraph 1), and claim 16 (figure 4 in connection with paragraphs 3 and 4).

D2 (figure 2 and page 3, lines 48-58, as well as figure 4 and page 4, lines 43-53) discloses the configuration of the rotor as a cylindrical body with a blind hole.

Consequently, the subject matter of claims 2-14 and 16 is not novel (PCT Article 33(2)).

The use of the drive known from D1 or D2 for driving a group of cylinders of an offset printing machine is a common procedure for a person skilled in the art, since D1 does not specify the type of rotary printing machines, while D2 relates to an offset printing machine and it is usual to couple the plate cylinder and the rubber blanket cylinder mechanically and to drive them in pairs by means of an electromotor (see D3).

Consequently, the subject matter of claim 15 does not involve an inventive step (PCT Article 33(3)).
